

Robinhood Chain — Market Data Summary

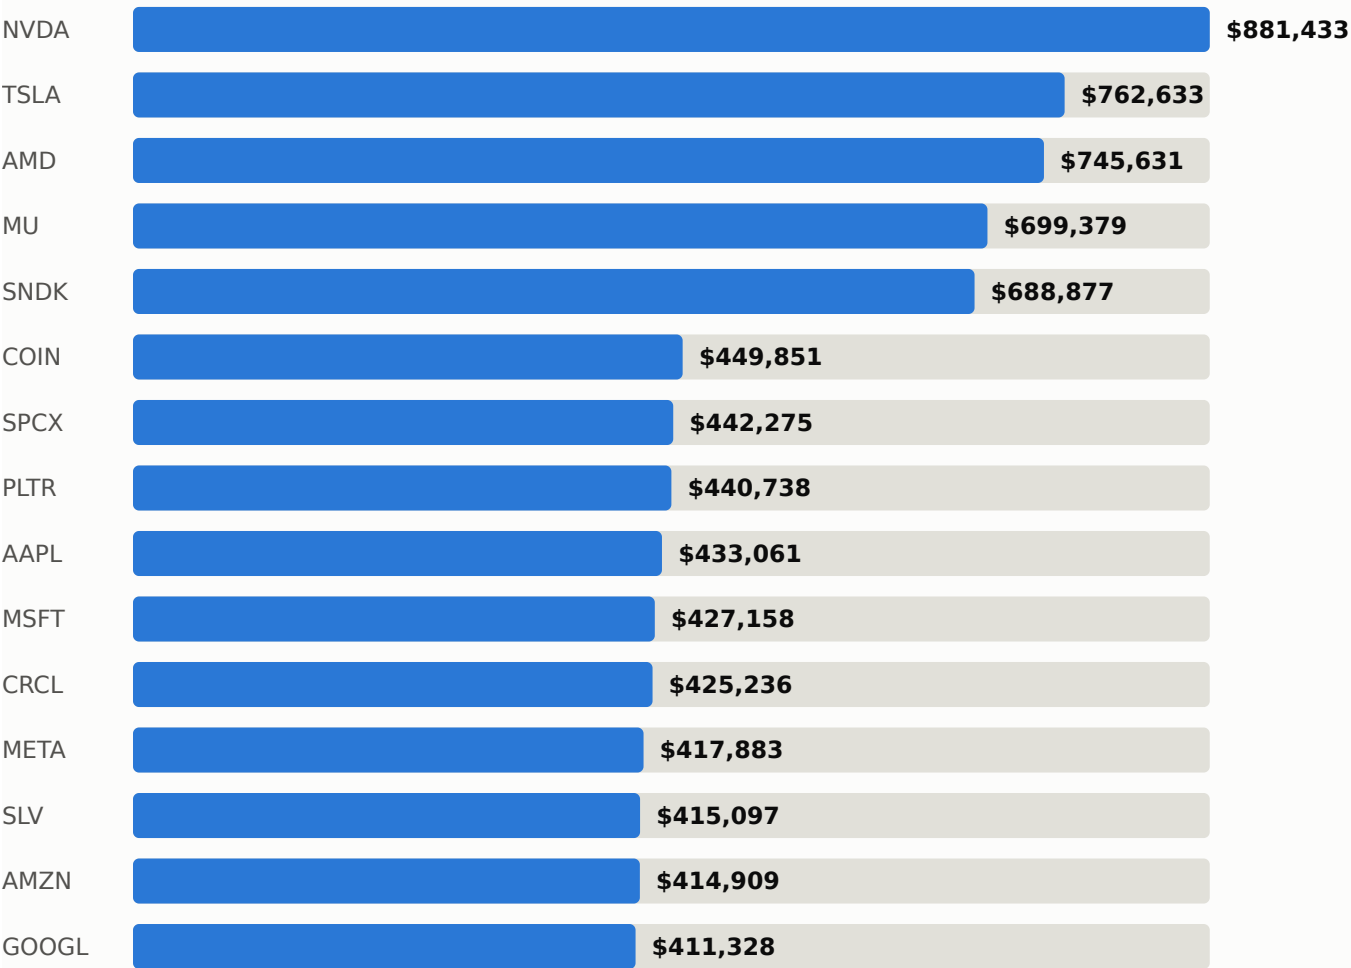

Tokenized-stock corpus snapshot via quickbeam MCP (Financial Knowledge Mesh)
Generated 2026-07-03 19:38 UTC · Robinhood Chain (id 4663), test corpus · 50 Assets / 578 Transfers

TOTAL TOKENIZED MARKET CAP \$10,660,814 across 50 listed assets	LIVE ORACLE PRICE FEED 32/50 64% of assets have a non-zero price	ASSETS TOUCHED BY THE TWO MARKET- MAKER WALLET CLUSTERS 100% every asset's recent transfer activity traces to Cluster A or Cluster B — see §3	TRANSFER RECORDS IN CORPUS 578 50 assets, refreshed ~60s by the watcher daemon
---	--	---	--

1. Market cap concentration

Top 15 assets by tokenized market cap

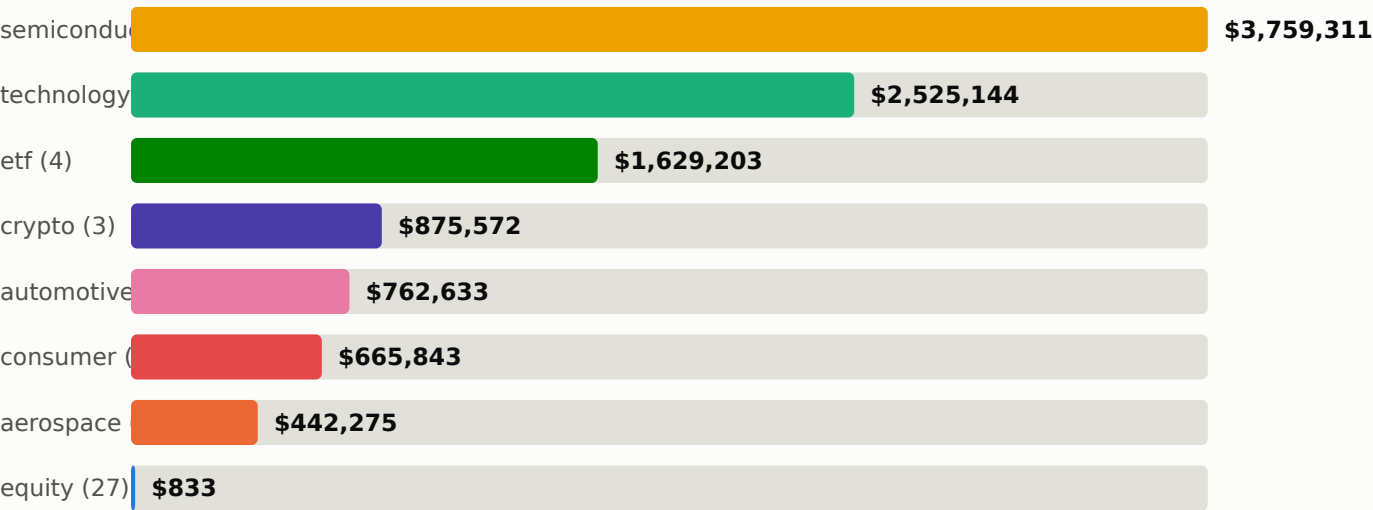

On-chain wrapper market cap (USD) — reflects token supply minted, not the real company's market cap

2. Sector composition

Market cap by sector

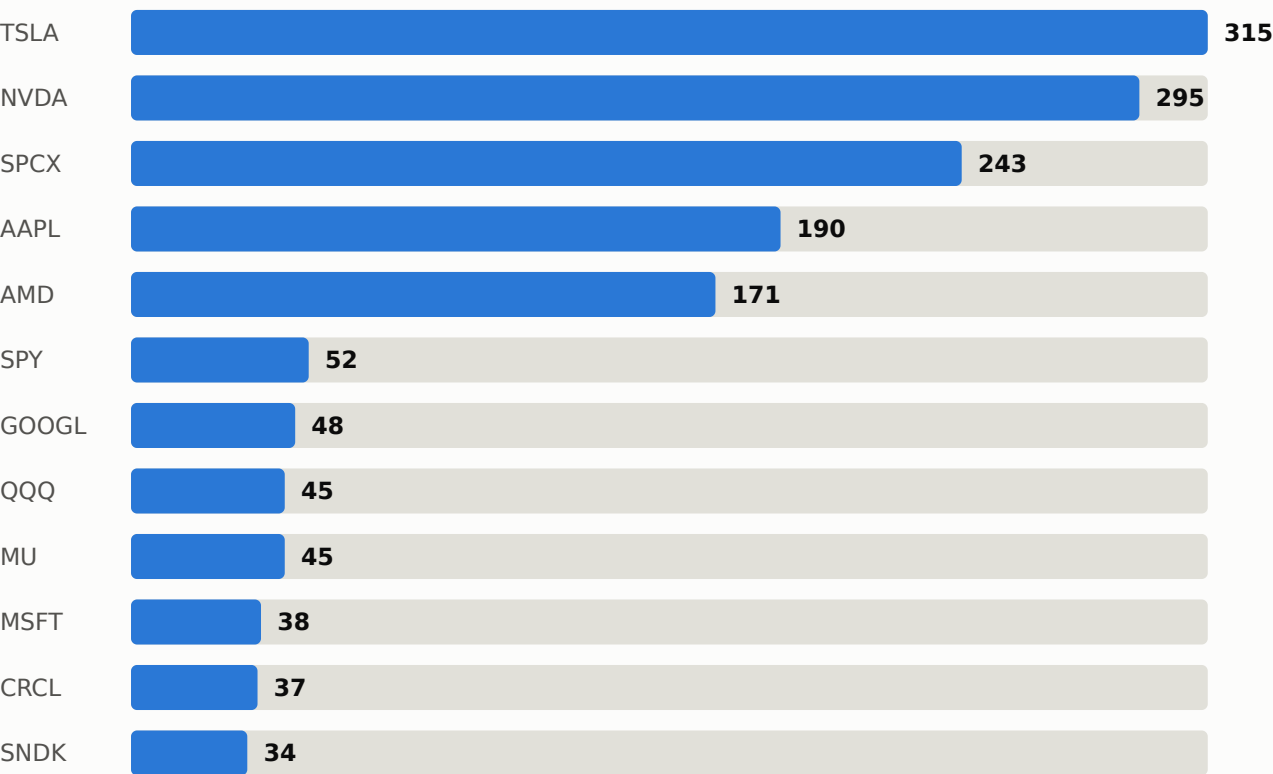

Sum of on-chain market cap across all assets tagged to each sector; (n) = number of assets

3. On-chain distribution vs. flagged flow

Broadest on-chain distribution (holder count)

The only activity signal not dominated by the two market-maker wallet clusters below

Every asset in the corpus shows wash-trading, not organic flow. Following each asset's `hasTransfer` edges turns up the same handful of wallets cycling near-identical amounts back and forth. Two clusters account for all 50 assets — `recentVolume` and `recentTransfers` should be read as market-maker simulation activity from the pipeline, not real demand.

Cluster A A

0x2F4579Ca... · 0x624C6Dbb... · 0xC94135b6... (+ per-asset extras)

24 assets — the larger, oracle-fed, liquid names (NVDA, TSLA, AAPL, mega-cap tech, ETFs)

AAPL, AMD, AMZN, BE, COIN, CRCL, CRWV, GOOGL, INTC, META, MSFT, MU, NVDA, ORCL, PLTR, QQQ, SGOV, SLV, SNDK, SPCX, SPY, TSLA, USAR, USO

Cluster B B

0x0000... (mint) · 0x1A18a8b9... · 0x6d56Ab47... · 0xcfaEce21... · 0xfac1d7dC... (+ per-asset extras)

26 assets — mostly small-cap / no-oracle-feed names minted then circulated in a closed loop

AMAT, APLD, ASML, ASTS, BABA, CLSK, COST, DDOG, EWY, FLNC, GLW, GME, IONQ, IREN, LITE, MSTR, NBIS, QCOM, RBLX, RDDT, RDW, RGTI, RKLK, SOFI, TSM, TTWO

4. Full asset table

Sorted by tokenized market cap. Cluster A/B = wallet cluster identified from transfer-flow analysis (§3); every asset in the corpus is flagged.

SYMBOL	SECTOR	PRICE	MKT CAP	HOLDERS	RECENT VOL	RECENT XFERS	CLUSTER
NVDA	semiconductors	\$194.57	\$881,433	295	0.3077	50	A

COST	equity	—	—	5	0.6821	13	B

Reading note: price mirrors the real equity (trustworthy). marketCap, holders, recentVolume and recentTransfers describe the on-chain tokenized wrapper only — not the real company — and in this snapshot are dominated by two market-maker wallet clusters (\$3), not organic trading interest. This is a synthetic/test corpus (Robinhood Chain id 4663), not a live brokerage feed.
